MEEN3120.001	My instructor stimulates my creativity.	0	1	5	4

### **Comments regarding the Instructor**

Dr. Feng is the capstone for our new developing department. He is fundamentally sound on all the material. He is passionate about his students, and our developing education.

Great instructor, took him before so he is now very easy to understand, explains himself very clearly and makes the material very interesting

Dr. Feng is one of my two favorite instructors in the MEE department. He is very well organized and explains material very clearly. In his office hours, which are made readily and easily accessible, he explains the material again if the student didnt quite get it the first time. When asked a question in class, he explains the material in a different manner in order to help the student understand it better.

The teacher was nice and almost always available to answer questions pertaining the class

He is my very favorite teacher at this entire school. At the department for my major there are only a handful of teachers and each time it is Dr. Feng that is teaching a course I feel very relieved. He is one of the best teachers that I have ever had the privilege of being taught by.

Dr. Feng is amazing :D

Best instructor at UNT.

### **Examinations (Comment on difficulty, fairness, number, etc.)**

Its fluid mechanics? Only if you have a doctorates in ME can you say this easy. Otherwise it is suppose to be hard.

Difficult but over material that was covered in hw. So he make very fair and good tests'

The exams were very fair and the instructor gave a fair amount of partial credit. The expectations for the exams were very clear and the reviews were similar yet not exactly the same.

The class was difficult. The instructor was fair.

I think that the examinations were very fair. There were only several different questions but he gave partial credit even if you didnt exactly get to the correct answer. Also, he generally gave an extra problem at the end of each test worth 20 points.

Very fair. Good Length.

The class examinations and quizzes were fair.

### **Course Content (Comment on the course content, subject matter, & relevance of this course.)**

Content was very interesting and stimulating

I am very interested in this material and with a little bit of effort I can understand it, especially since the instructor conveys the material well and explains things clearly.

This course material was relevant to what I need for my major.

The course content was very good. I doubt that it would be so easy to understand from a lesser teacher.

Course content was hard to grasp at first, but becomes easier and more clear with practice.

### **Evaluate the quality of your own work in this course (What have you done well? What could you do to improve your learning?)**

I feel I learned the most in this class this semester. Probably my most difficult yet interesting class

I didnt have to study much because I understood the material just by doing homework and paying attention in and attending every class.

I have learned more about the subject matter. I need to stop being lazy when it comes to turning in hw assignments, studying the notes, and studying for tests.

I could have tried harder to better learn the required material.

I think I worked pretty hard in this course. I honestly didnt read very much but then again it wasnt really necessary with such a great teacher.

Do more problems.

I worked according to my level of interest in the subject.

Comments regarding the course structure

The most structured, organized, and challenging course I have taken in my four years of undergrad.

Great

This course moves at a perfect rate; not too little to cover in one semester where the students are bored out of their minds, but not too much to cover that the students get overwhelmed with all the material that is required.

The course was well structured and followed the syllabus precisely.

This course was very nicely structured. He actually got through everything he intended to get through. I feel like I learned a lot.

Course structure seemed logical.
